Clinical research is a very important part of what we do at Sidra. Information from clinical research can improve quality of medical care, save lives, and help in developing new treatments for common and rare medical conditions. You too can help to improve the lives of others by participating in clinical research at Sidra Medicine.

Here are some frequently asked questions about clinical research at Sidra and how your child can be a part of a research:

1. Why is Sidra doing clinical research?
Research can help to find new and better ways to identify, prevent and treat diseases.

2. What is special about the research at Sidra?
Our research focuses on diseases that are common in Qatar. Through our research we hope to find better treatments for diseases that affect the children of Qatar.

3. Why is it important for my child to participate in research?
Current medicines and treatments were designed to work for adults and were tested on adults. By letting your child participate in clinical research, you will be contributing to research that is specifically designed for improving children’s health care.

4. How can your child be a part of research at Sidra?
The are many things that determine if a child is eligible to participate in research. Your child’s doctor will discuss with you if your child meets the requirements to take part in research at a Sidra.

5. What will happen if I do not want my child to participate in research?
You can decide whether or not you want your child to be part of any research at Sidra. Participation is purely voluntary. If you decide not to let your child participate, there will be no loss of treatment benefits. Your child will continue to be taken care of by the doctor and nurses like normal.

6. What if my child is involved in research and I change my mind?
You can withdraw your child from a research study any time.
